

S P August's 'Green Meadows Railway'

The Green Meadows Railway is not modeled on anything. It is a fictitious railway that has a little bit of everything. It runs from North Platte, NE to St. Louis, MO. The HO scale layout is built on two levels in a small one car garage. It is set in the "transitional era" and features a variety of mixed freight and unit trains running between Missouri and Nebraska. Both the Bailey and Green Meadows Yards are represented as storage yards on the second level.

This is a small railroad with an ideal crew of 3 - 4. The railroad is Easy DCC Digital Control. No foreign power allowed for these sessions.

**Crew Positions Available
For Operations:**

**Dispatcher Provided
2 - Yard Masters
2 - Train Crews**

This is a small, but challenging layout with lots of switching. My townhouse is located in a gated community. Parking is limited; a gate code to enter the community will be provided with the directions.
